

Local Shop Inventory Management System

Overview

Local Shop Inventory Management System is a Java and MySQL based application designed to help small businesses manage products, monitor stock levels, and generate sales reports efficiently.

Features

- Product Management
 - Add new products
 - View available products
 - Update product details
- Delete products
- Inventory Tracking
 - Monitor stock quantity
 - Automatic stock updates after sales
- Low Stock Alerts
 - Displays products with stock below the minimum threshold
- Sales Management
 - Record product sales
 - Update inventory automatically
- Revenue Dashboard
 - Calculate daily revenue
 - Generate sales summaries

Technologies Used

- Java
- JDBC
- MySQL Database

Database Schema

Products Table

Column	Type
id	INT (Primary Key)
name	VARCHAR(100)
quantity	INT
price	DOUBLE

Sales Table

Column	Type
sale_id	INT (Primary Key)
product_id	INT
quantity_sold	INT
total_amount	DOUBLE
sale_date	DATE

Installation

1. Install MySQL Server.
2. Create the database using the provided SQL script.
3. Configure database credentials in `DBConnection.java`.
4. Compile all Java files.
5. Run `Main.java`.

How to Run

```
javac *.java  
java Main
```

Example Menu

1. Add Product
2. View Products
3. Sell Product
4. Low Stock Alert
5. Daily Revenue

6. Exit

Future Enhancements

- Java Swing GUI
- User Login Authentication
- Barcode Scanner Integration
- PDF Report Generation
- Inventory Analytics Dashboard
